Healthcare

Vet news - C7 Vaccination

- As you are aware our minimum Vaccination requirement has been the C5. However, from March we will now require the C7 that covers Leptospirosis.

What is Leptospirosis?

- Leptospirosis is a bacterial disease of humans and animals. It is caused by Leptospira bacteria that are excrete in urine form infected animals.

- We do understand their has been a shortage of the C7 vaccine in the hunter valley so we do still except the C5 as minimum vaccine requirement, however we do advise you speak to your vet about organising to get the Leptospirosis vaccine administered.

School Uniform

As part of the Uniform here at NPR we ask all fur kiddies to come with their **collars on**. This is to ensure the safety of your fur baby as well as the staff here at NPR.
